

***Humidicutis arcohastata***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** About 2-4cm diam., conical to broadly conical then flat. Deep olive green becoming orange or orange-red. Margin yellow tinted. Can be mistaken for *Hygrocybe aurantipes*.

**Gills.** Adnate, thick, greenish yellow, becoming orange tinted.

**Spore print.** White

**Stipe.** About 2-4cm, cylindrical 2-4mm pale green/mauve to orange toward base.

**Habitat.** Caespitose among moss and leaf litter

***Humidicutis ( Porpolomopsis) lewellinae***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Pale violet with a darker umbo. Convex to expanded. The margins split irregularly along the axis of the gills.

**Gills.** Concolorous with the cap, paler near the stem. Moderately close and waxy. Adnexed to almost free.

**Spore print.** White.

**Stipe.** Concolorous with the cap, paler at the base, smooth, hollow.

**Habitat.** On damp soil.

***Humidicutis helicoides***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Diam. 3.5cm., convex slightly umbonate, dark olive green.

**Gills.** Adnate, lime green.

**Stipe.** Cylindrical, smooth, hollow, pale green.

**Spore print.** White.

**Habitat.** On soil in leaf litter.

***Humidicutis taekeri***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Olive green, 2.5 cm diameter, convex.

**Gills.** Deep orange, adnate.

**Spore print.** White.

**Stipe.** Pale green, long and relatively thick.

**Habitat.** On damp soil in the rainforest.

***Humidicutis mavis***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** All white, convex to upturned with a slight umbo, moist, margin splitting along axis of the gill.

**Gills.** White, distant

**Spore print.** White.

**Stipe.** Long, white, cylindrical, no ring.

**Habitat.** On soil in moist forest.

***Hygrocybe apricosa***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Orange, conical, moist.

**Gills.** Orange.

**Spore print.** White.

**Stipe.** Long, cylindrical orange.

**Habitat.** On damp soil.

***Hygrocybe astatogala***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Conical, tones of orange, red or yellow, with black fibrils, the cap becoming black with age.

**Gills.** Cream, becoming dark with age.

**Spore print.** White.

**Stipe.** Yellowish with overlying black fibrils.

**Habitat.** On moist soil.

***Hygrocybe aurantiopallens***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Convex, pale golden colour

**Gills.** Same as cap.

**Spore print.** White.

**Stipe.** Concolorous with the cap.

**Habitat.** On moist soil

***Hygrocybe aurantipes***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Broad, expanded at the margins, yellow becoming darkened.

**Gills.** Distant, sinuate, with lamellulae near the margin, yellow.

**Spore print.** White.

**Stipe.** Yellow to pale orange.

**Habitat.** On soil.

***Hygrocybe chromolimonea***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Small convex, diam. 1- 2 cm, viscid, bright yellow, margin slightly inrolled.

**Gills.** Yellow same as cap, decurrent distant. Viscid gill margins.

**Stipe.** Concolorous with the cap, viscid, relatively long and slender.

**Spore print.** White.

**Habitat.** On soil in rainforest.

***Hygrocybe bolensis***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Convex, then irregularly convex, radially fibrillose, brilliant scarlet red. Diam. 2.0 cm.

**Gills.** Decurrent, thick, pale orange.

**Stipe.** First velvety, cylindrical, hollow, orange-bright red.

**Spore print.** White.

**Habitat.** Occurs caespitose in soil among leaf litter

***Hygrocybe cantharellus***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Convex or plano-convex, diam. - 2.2cm, fine velvety, slightly fibrillose, brilliant orange-red.

**Gills.** Deeply decurrent, white-pale cream.

**Stipe.** Cylindrical, red-bright orange, yellowish at base.

**Spore print.** White.

**Habitat.** Grows in moss, soil among leaf litter and privet.

***Hygrocybe collucera***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Conico-convex, diam 2cm., smooth and finely fibrillose, bright scarlet.

**Gills.** Arcuate to deeply decurrent, brilliant yellow.  
**Stipe.** Cylindrical, smooth, brilliant scarlet, yellow towards base.  
**Spore print.** White.  
**Habitat.** Caespitose on soil among moss.

***Hygrocybe erythrocala***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Conical to flattened, red, fading to orange  
**Gills.** Cream, with intermediate lamellae .  
**Stem.** Somewhat stout, paler than the cap.  
**Spore print.** White.  
**Habitat.** On soil.

***Hygrocybe erythrocrenata***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Convex, margin crenulated, red, moist. Diam. 1.5- 2 cm.  
**Gills.** Decurrent, distant, gill edges irregular, paler than the cap, intermediate lamellulae.  
**Stipe.** Long. thin concolorous with the cap.  
**Spore print.** White.  
**Habitat.** On soil.

***Hygrocybe graminicolor***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Convex, approximately 2.5 cm diameter, glutinous and translucent.  
**Gills.** White to greenish, margins glutinous. decurrent.  
**Spore print.** White.  
**Stipe.** Long (7.5 cm), green. viscid  
**Habitat.** On soil.

***Hygrocybe griseoramosa***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Cap 3cm, finally umbonate and upturned, smooth, striate, non-viscid, grey-sepia brown.  
**Gills.** Adnate, moderately thick and veined, forked at end of pileal margin, grey.  
**Stipe.** Cylindrical, finely fibrillose, pale grey  
**Spore print.** White.  
**Habitat.** Grows caespitose in soil among leaf litter and moss.

***Hygrocybe irrigata***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Diam. 3.0 cm., convex, smooth, thickly glutinous, dark brown.  
**Gills.** Broadly adnate, white.  
**Stipe.** Cylindrical, smooth, thickly glutinous, dark brown.  
**Spore print.** White.  
**Habitat.** On soil among moss and leaf litter

***Hygrocybe kula***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Convex, then depressed, red-dark orange.  
**Gills.** Deeply decurrent, cream coloured.  
**Stipe.** Cylindrical, red tapering to yellow-orange at base.  
**Spore print.** White.  
**Habitat.** On soil among grass and leaf litter.

***Hygrocybe lanecovensis***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Brilliant scarlet, 2.3cm. diam., margin crenulate, convex.  
**Gills.** Deeply decurrent, thick, white to off-white with age.  
**Stipe.** Cylindrical, smooth to slightly rough, brilliant scarlet.  
**Spore print.** White.  
**Habitat.** Grows caespitose in soil among moss and leaf litter.

*Hygrocybe miniata*

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Bright red, convex becoming plane, smooth, moist.  
**Gills.** White becoming yellowish, decurrent, distant.  
**Spore print.** White.  
**Stipe.** Concolorous with the cap. Long, slender, hollow.  
**Habitat.** Gregarious on the ground, often amongst moss.

*Hygrocybe pseudograminicolor*

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Convex, moist, green to yellowish, ≈ 2.5 cm.  
**Gills.** Yellow, close.  
**Stipe.** Green.  
**Spore print.** White.  
**Habitat.** On damp soil.

*Hygrocybe reesiae*

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Convex, with indent in the middle, pale lilac, diam. 1-2 cm.  
**Gills.** Concolorous with the cap, decurrent, distant, with short lamellulae.  
**Stipe.** Lilac beneath the cap, tan towards the base, moderately stout.  
**Spore print.** White.  
**Habitat.** On damp soil.

*Hygrocybe rubronivea*

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Convex, crimson, margin slightly crenulate.  
**Gills.** Adnate, thick, widely spaced, white to off-white with age.  
**Stipe.** Cylindrical, crimson, paling with age, base somewhat tinted yellowish.  
**Spore print.** White.  
**Habitat.** Grows caespitose on soil, among leaf litter.

*Hygrocybe stevensoniae*

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Diam. to 3 cm, green becoming pinkish with age, glutinous, convex becoming flattened.  
**Gills.** White, dry, distant slightly decurrent, with small intermediate gills.  
**Stipe.** Green, glutinous relatively slender.  
**Spore print.** White.  
**Habitat.** On soil.

*Hygrocybe viscidibrunnea*

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales  
**Cap.** Diam. to 4cm, centrally indented, smooth, viscid, orange brown.  
**Gills.** Decurrent, thick and tinged light pinkish with a gluten thread.  
**Stipe.** To 6cm approx, smooth, viscid, yellowish brown, cylindrical.  
**Spore print.** White.  
**Habitat.** On soil among leaf litter.

***Hygrophorus involutus***

Division Eumycota Subdivision Basidiomycotina Class Homobasidiomycetes Order Agaricales

**Cap.** Convex, with an inrolled margin, cream.

**Gills.** Yellow, close.

**Stipe.** Long slender, cream.

**Spore print.** White.

**Habitat.** On soil.

***Camarophyllopsis kearneyi***

Division Basidiomycota Class Agaricomycetes Order Agaricales Family Clavariaceae (genus formerly in Hygrophoraceae)

**Cap.** About 1cm diam., strongly convex, pale brown with darker centre, margin crenulate paler colour towards margin.

**Gills.** Adnate, distant, thick white to greyish white.

**Stipe.** About 1.5-2.7cm and cylindrical (1.5-2.5mm thick). Fine brownish fibrils, dry and solid.

**Spore print.** White.

**Habitat.** Caespitose on mossy soil in sheltered position.
